MITCHELL - EXHIBIT D

Novelty of Variety Mitchell

To the breeder's knowledge, the soybean variety "Mitchell" most closely resembles the variety Cutler. Mitchell is similar to Cutler in that it also has tawny pubescence, ~~brown~~ pod color, and purple flower color; but it can be distinguished from Cutler by its brown hilum color. Mitchell is also three days later than Cutler and has better emergence than Cutler. Yield data from state experiment tests in 1973 illustrates Mitchell's yield superiority over Cutler.
